

Create OTA package

Firstly, generating an OTA package requires three important files

resource.json This file is a configuration file and does not require manual modification.

Package script: package_resource.ps1/package_firmware.ps1 This is a script file that runs on PowerShell

Original File:

Fireware Original File:: Firmware_Version.bin

Firmware_V0.0.1.bin

Cert and Param Original File:: CertParam_Version.zip

CertParam_V0.0.1.zip

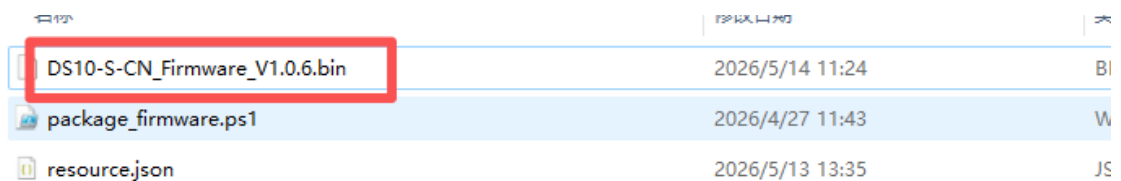

Voice Original File:: Voice_Version.zip

Voice_V0.0.1.zip

The version number is required when naming the file above. The file suffix type should be consistent

1. Create OTA firmware package

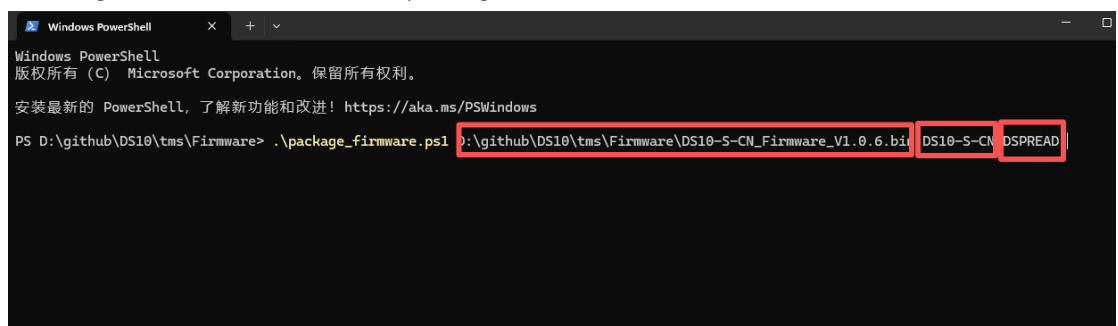

- (1) Firstly, place the bin file generated in step 4 of project-build.bat into the tms/firmware directory And modify the file name as required.

DS10-S-CN_Firmware_V1.0.6.bin	2026/5/14 11:24	BI
package_firmware.ps1	2026/4/27 11:43	W
resource.json	2026/5/13 13:35	JS

- (2) Open PowerShell and run package_firmware.ps1. The script requires three parameters to be entered

1. Original files that need to be packaged 2 Device Mode 3 Customer Name

```
Windows PowerShell
版权所有 (C) Microsoft Corporation。保留所有权利。
安装最新的 PowerShell，了解新功能和改进！https://aka.ms/PSWindows
PS D:\github\DS10\tms\Firmware> .\package_firmware.ps1 D:\github\DS10\tms\Firmware\DS10-S-CN_Firmware_V1.0.6.bin DS10-S-CN DSPREAD
```

- (3) After completing the parameter input, press enter to execute the script, which will automatically generate an OTA firmware package that can be uploaded to the TMS system.

```

PS D:\github\DS10\tms\Firmware> .\package_firmware.ps1 D:\github\DS10\tms\Firmware\DS10-S-CN_Firmware_V1.0.6.bin DS10-S-CN DSPREAD
Filename: DS10-S-CN_Firmware_V1.0.6.bin
MD5 Value: 15c63fad325055cb9b50025947393aca
Version: V1.0.6
New package name: AP_DS10-S-CN-MQ_DSPREAD_V1.0.6.zip
MD5 hash, version, machineType, customerName and file information updated successfully in resource.json
New package created AP_DS10-S-CN-MQ_DSPREAD_V1.0.6.zip
PS D:\github\DS10\tms\Firmware>

```

(4) AP_DS10-S-CN-MQ_DSPREAD_V1.0.6.zip It is a generated OTA firmware package that can be uploaded to the TMS system for updating device firmware.

2. Create Cert and Param OTA package

(1) About tms/CertParam/ ResourceFile/posparam.ini

posparam.ini is JSON fomart.

The following is a list of parameters that support remote updates

Param Name	Type	
MqttUrl	String	MQTT server address
MqttPort	String	MQTT server port
username	String	Username for connecting to MQTT server
password	String	Password for connecting to MQTT server
clietId	String	ClientId for connecting to MQTT server In general, no setting is required, SN is used as the client ID by default in the firmware
Topic	String	It is the base topic, and the device will automatically append its own SN to form the final subscription topic Example;user/message/sn
LogStatus	Int	0: Release 2:Debug
CertState	Int	0: No certificate needs to be set up 1: A certificate needs to be set up

(2) About original Cert and Param files

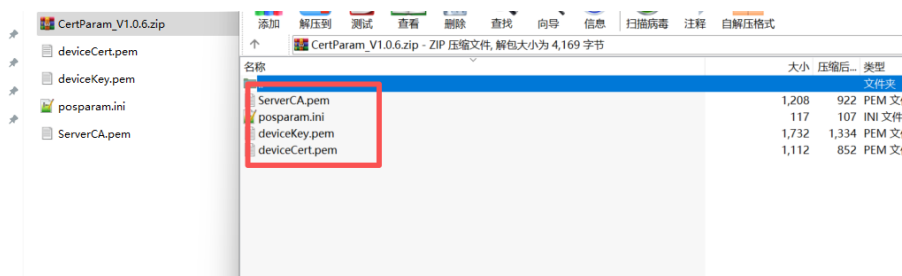

If set CertState with 0,

posparam.in file is needed to create CertParam_V1.0.6.zip

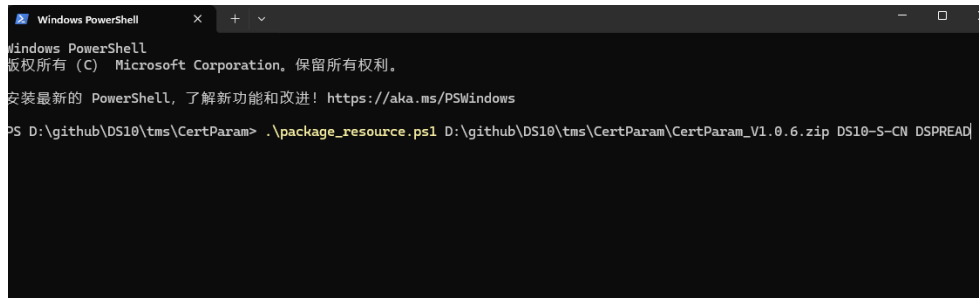

Please note that the zip file only contains the posparam.ini file Cannot contain other folders

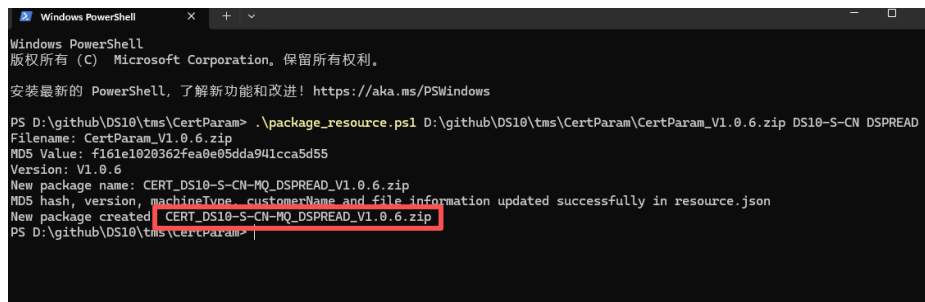

If set CertSate with 1 posparam.iniand cert files are needed to create CertParam_V1.0.6.zip

(3) Open powershell and run ./CertParam/package_resource.ps1

(4) Create Cert and Param OTA package.

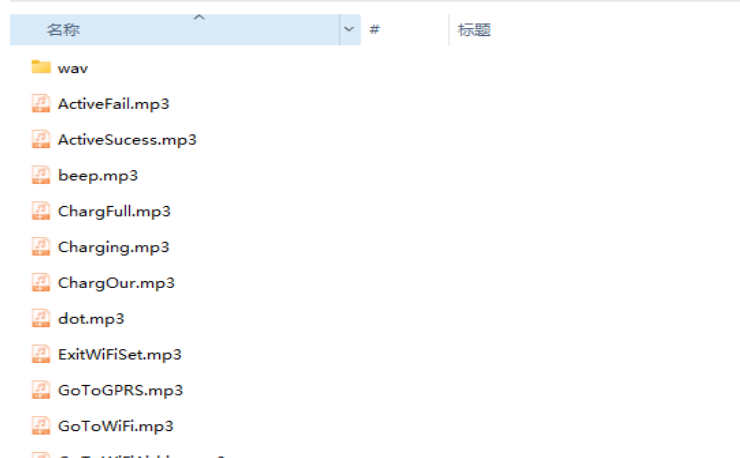

3. Create Voice OTA package

The device supports updating played voice files through TMS. Support single file and batch file updates.

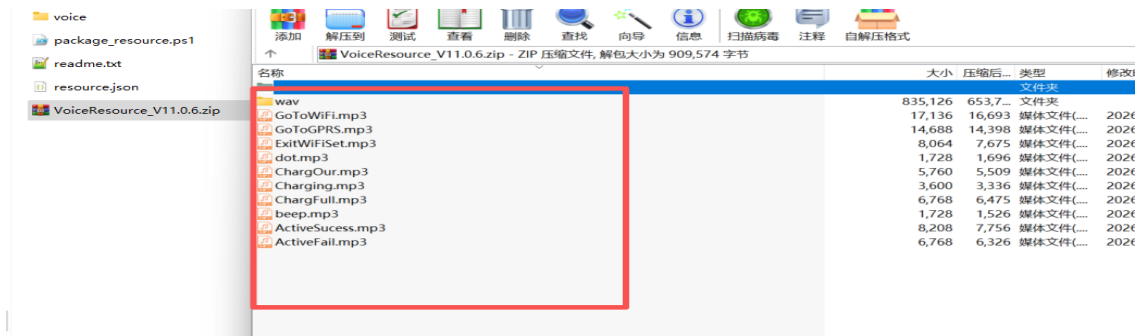

(1) Original voice files: tms/VoiceResource/voice

i > Data (D:) > github > DS10 > tms > VoiceSource > voice

(2) Create Voice Original files,

map3 and wav files are needed to create VoiceResource_V1.0.6.zip

(3) Open powershell and run package_resource.ps1

```
Windows PowerShell
版权所有 (C) Microsoft Corporation. 保留所有权利。

安装最新的 PowerShell, 了解新功能和改进! https://aka.ms/PSWindows

PS D:\github\DS10\tms\VoiceSource> .\package_resource.ps1 D:\github\DS10\tms\VoiceSource\VoiceResource_V11.0.6.zip DS10-S-CN DSPREAD
```

(4) Create Voice OTA package

```
Windows PowerShell
版权所有 (C) Microsoft Corporation. 保留所有权利。

安装最新的 PowerShell, 了解新功能和改进! https://aka.ms/PSWindows

PS D:\github\DS10\tms\VoiceSource> .\package_resource.ps1 D:\github\DS10\tms\VoiceSource\VoiceResource_V11.0.6.zip DS10-S-CN DSPREAD
Filename: VoiceResource_V11.0.6.zip
MD5 Value: 62910e1c16b0a0ec7d96c682c70001b
Version: V11.0.6
New package name: CUST_DS10-S-CN-MQ_DSPREAD_V11.0.6.zip
MD5 hash, version, machineType, customerName and file information updated successfully in resource.json
New package created: CUST_DS10-S-CN-MQ_DSPREAD_V11.0.6.zip
PS D:\github\DS10\tms\VoiceSource>
```
